Ideation Phase
Brainstorm & Idea Prioritization Template

Date	3rd October 2026
Team ID	SWTID-2026-4846
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Our team:

Team Member	Role
Deepak K	Team Leader
Dev Prasath L	Team Member
Aswathaman K	Team Member

Problem statement we selected:

The school IT helpdesk gets many requests every day from students and teachers (Wi-Fi, projector, password and slow computer problems). The IT staff read each ticket and choose the category by hand. This takes a lot of time, can cause mistakes, and does not work well when the number of tickets grows. We want to sort these tickets automatically.

Step-2: Brainstorm, Idea Listing and Grouping

Group	Ideas we listed
Sort tickets automatically	Flow Designer with keyword rules (no code) Business Rule with a script Machine learning model that reads the text
Keep data clean	Category and Subcategory choices that depend on each other Auto Number for every ticket Caller and Short description are required
Talk to the caller	Email after the ticket is created SMS message Email when the ticket is solved
Routing and follow-up	Assign the ticket to the right group automatically SLA timer

	Dashboard with ticket counts

Step-3: Idea Prioritization

We gave each idea a score for impact and effort. We chose the ideas that give high value with low effort.

Idea	Impact	Effort	Our decision
Flow Designer keyword rules	High	Low	Do now
Dependent Category and Subcategory choices	High	Low	Do now
Auto Number for every ticket	Medium	Low	Do now
Email to the caller after the ticket is created	High	Low	Do now
Business Rule with a script	Medium	Medium	Not chosen (harder to maintain)
Machine learning model	Medium	High	Not chosen (needs data and more time; keywords are enough)
Assign to the right group automatically	High	Medium	Future work
SLA timer	Medium	Medium	Future work
Dashboard with ticket counts	Low	Medium	Future work
SMS message	Low	Medium	Not now
