Project Design Phase-II
Data Flow Diagram & User Stories

Date	3rd October 2026
Team ID	SWTID-2026-4846
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

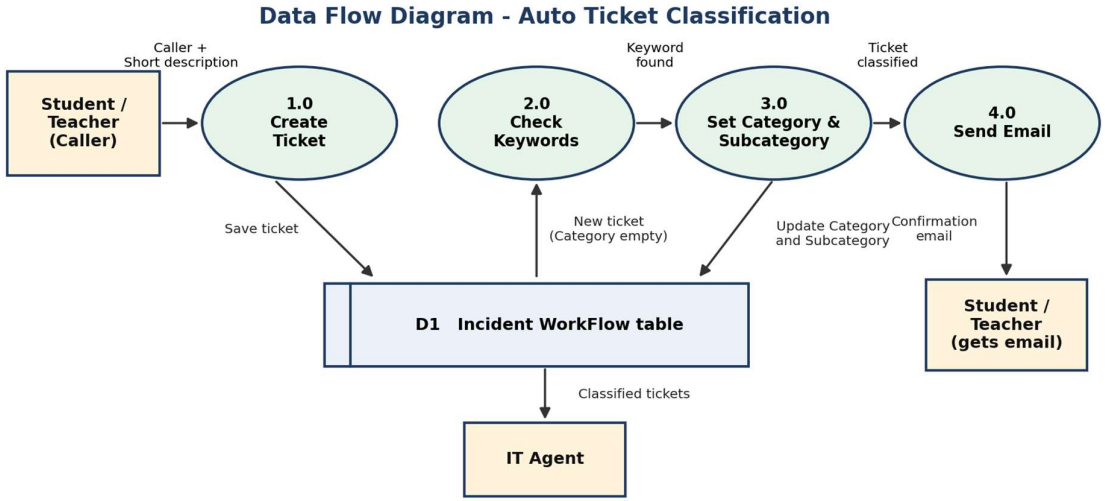

Figure: Data flow of Auto Ticket Classification

How the data moves: the student or teacher sends the Caller and Short description (1.0). The ticket is saved in the Incident WorkFlow table (D1). The flow reads new tickets with an empty Category and checks the keywords (2.0). It then sets Category and Subcategory (3.0) and sends a confirmation email to the caller (4.0). The IT agent sees the classified tickets.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	Requirement Analysis	USN-1	As an administrator, we can write down the business needs of the school IT helpdesk, so that we know what to build.	Business requirements are written and agreed by the team	High	Sprint-1
Administrator	Requirement Analysis	USN-2	As an administrator, we can create a new Update Set called Project Update Set and make it current, so that all our changes are saved in one place.	Update Set shows as current	High	Sprint-1
Administrator	Custom Table	USN-3	As an administrator, we can create a custom table called Incident WorkFlow with Auto Number turned on, so that every ticket gets its own number.	New ticket gets a number like INC00511	High	Sprint-1
Administrator	Custom Table	USN-4	As an administrator, we can create the fields Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned To, so that ticket details are saved in a clean way.	All fields show on the ticket form	High	Sprint-1
Administrator	Choice Fields	USN-5	As an administrator, we can add choices to the Category, Subcategory and State fields, so that users pick from a list.	Drop-down lists show all the choices	High	Sprint-2
Administrator	Choice Fields	USN-6	As an administrator, we can make Subcategory depend on Category, so that only the matching choices show.	Network shows Wi-Fi and Hardware shows Projector	High	Sprint-2
Student / Teacher (Caller)	Ticket Creation	USN-7	As a student or teacher, we can create a ticket by entering only the Caller and the Short description, so that raising a request is quick.	Ticket is saved without choosing a Category by hand	High	Sprint-2
Administrator	Flow Setup	USN-8	As an administrator, we can create a flow called Auto Classify School IT Tickets that starts when a ticket is created and Category is empty, so that only new tickets are checked.	Flow trigger is Record Created on Incident WorkFlow with Category is empty	High	Sprint-2
Administrator	Auto Classification	USN-9	As an administrator, we can add a rule: if the Short description has Wi-Fi or Network, set Category to Network and Subcategory to Wi-Fi.	Test ticket gets Network and Wi-Fi	High	Sprint-3

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	Auto Classification	USN-10	As an administrator, we can add a rule: if the Short description has Projector, set Category to Hardware and Subcategory to Projector.	Test ticket gets Hardware and Projector	High	Sprint-3
Administrator	Auto Classification	USN-11	As an administrator, we can add a rule: if the Short description has Forgot password, set Category to Access and Subcategory to Forgot Password.	Test ticket gets Access and Forgot Password	High	Sprint-3
Administrator	Auto Classification	USN-12	As an administrator, we can add a rule: if the Short description has Slow computer, set Category to Performance and Subcategory to Slow Computer.	Test ticket gets Performance and Slow Computer	High	Sprint-3
Student / Teacher (Caller)	Email Notification	USN-13	As a student or teacher, we get an email after our ticket is created, so that we know our request was received.	Email is sent to the caller email address	High	Sprint-3
Administrator	Email Notification	USN-14	As an administrator, we can activate the flow, so that it starts working on new tickets.	Flow status shows Active	High	Sprint-3
IT Agent	Testing & Validation	USN-15	As an IT agent, we can open a Wi-Fi ticket and a Projector ticket and see Category and Subcategory already filled, so that we do not sort them by hand.	Network / Wi-Fi and Hardware / Projector are filled automatically	High	Sprint-4
Administrator	Testing & Validation	USN-16	As an administrator, we can open System Logs > Emails and preview the message, so that we know the email was sent.	Email record is found and Preview Email shows the message	High	Sprint-4
IT Agent	Testing & Validation	USN-17	As an IT agent, we can test Forgot password and Slow computer tickets, so that all four rules are checked.	Access / Forgot Password and Performance / Slow Computer are filled automatically	Medium	Sprint-4
Administrator	Testing & Validation	USN-18	As an administrator, we can run data checks (required fields, no repeated numbers, correct values, working reference fields), so that ticket data is correct.	All data checks pass	Medium	Sprint-4
Administrator	Deployment	USN-19	As an administrator, we can set the Project Update Set to Complete and export it as an XML file, so that we can share the work.	XML file is downloaded	High	Sprint-4
Administrator	Deployment	USN-20	As an administrator, we can finish the final project document, so that the work is easy to understand and reuse.	Final document is ready	Medium	Sprint-4
