Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

We made one empathy map for each main user of the school IT helpdesk. They are based on our problem statement.

Student / Teacher (raises the ticket)

User: Student / Teacher (raises the ticket)	
SAYS - Our Wi-Fi is not working. - Please fix the projector before our class. - We forgot our password. - Did you get our request?	**THINKS** - Which category should we choose? - Will someone see this soon? - We hope it is fixed before class.
DOES - Types the problem in the ticket form. - Waits for a reply. - Asks the helpdesk again in person or by phone.	**FEELS** - Worried - Impatient - Confused by the form
PAINS - Not sure which category to pick. - No message that the request was received. - Waiting time is long.	**GAINS** - A simple form with few fields. - An email right after the ticket is created. - Fast help.

IT Helpdesk Staff (handles the tickets)

User: IT Helpdesk Staff (handles the tickets)	
SAYS - There are so many tickets today. - This ticket has the wrong category.	**THINKS** - Sorting tickets takes too much of our time. - We must send each ticket to the right place.
DOES - Reads every ticket. - Chooses Category and Subcategory by hand. - Tells the caller the ticket was created.	**FEELS** - Tired - Overloaded - Under pressure
PAINS - Too much manual work. - Mistakes in categories. - More tickets every day.	**GAINS** - Tickets sort themselves. - More time to fix real problems. - Same, clean data in every ticket.
